

Product Release - Salix Features and Benefits

Aralia Systems Ltd, an unrivalled provider of intelligent video surveillance software for physical security devices, has released a new and innovative video forensic and data mining product, 'Salix'. This leading edge solution significantly increases and enhances user functionality without the need to replace any existing hardware, so eliminating the need for large capital investment. In addition to significant cost savings, Salix is highly flexible and robust. It will work on a small single camera system to large control centres and can even process data from a moving platform such as a UAV (unmanned aerial vehicle).

This feature rich solution is unique to the video surveillance market and testimony to Aralia's in-house expertise.

Features	Benefits
An autonomous solution that can be added to existing video surveillance systems to provide automated alarming, full forensic searching and report generation	Minimal capital investment <ul style="list-style-type: none"> - Seamlessly integrates with existing physical security devices and systems - No need to replace existing hardware, allowing significant cost savings to be made - Compatible with existing video management systems
Salix can be used for both fixed cameras and moving platforms (UAVs)	Flexible and robust <ul style="list-style-type: none"> - Scalable from a single camera system to large control centres - Can be deployed on moving platforms
The software comes with a full suite of calibration and configuration tools	Easy to use <ul style="list-style-type: none"> - Improved deployment and automatic scene calibration tools - Reduces the need for skilled technicians during commissioning - System can be remotely initiated and controlled from any location

<p>Improved integrated GIS with a built-in overlay to display alarms and object ranking</p>	<p>Efficient management of resources</p> <ul style="list-style-type: none"> - Security breaches are quickly identified in real time - Complete situational awareness, e.g. users alerted via mobile phones - Quickly and easily replay footage from an alarm incident - Greater safety for first responders
<p>Operational and business rules integrated with Aralia's relational databases</p>	<p>Enhanced system integration</p> <ul style="list-style-type: none"> - Interoperability with an organisation's existing CONOPS system
<p>Relational database</p>	<p>Critical reporting captured</p> <ul style="list-style-type: none"> - Simple and frequent reporting (Crystal Reports™) provides an assessment of any security weaknesses - Ability to rapidly search incidents, e.g. verifying accident insurance claims
<p>Statistical analysis of data</p>	<p>Significant cost savings</p> <ul style="list-style-type: none"> - Low false alarm rate through comprehensive assessment of threat

Aralia Systems Ltd is committed to continuing to improve its existing software portfolio by pushing for even greater innovative and creative solutions. We are dedicated to providing reliable and future proof solutions at a competitive price to our customers.
